SUMMARY

Software Engineer with 2 years of experience in backend services, LLM-powered applications and test automation, using Python, TypeScript, Java and SQL. At Amdocs, cut manual testing by 50% and isolated the root cause of 40+ Linux failures; at TovTech, built React, Firebase and Gemini platforms end to end.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL, Bash, PowerShell
Backend & Frontend: REST APIs, Flask, Node.js, Spring Boot, React, Next.js, HTML/CSS
Databases: PostgreSQL, MySQL, MongoDB, Firebase (Firestore), Supabase, Cloudflare D1
AI & LLM: LLM APIs (Claude, Gemini), RAG, few-shot prompting, Claude Code, Codex
Testing & Automation: Pytest, Selenium, Appium, TestNG, API / E2E / Regression / Performance Testing
Cloud & DevOps: AWS (EC2, S3), Google Cloud, Docker, CI/CD Pipelines, Git, Maven, Kafka
Linux & Networking: Linux, Windows Server, gdb, strace, Wireshark, TCP/IP, UDP, HTTP, DNS

EXPERIENCE

TovTech — *Software Engineer* · Remote *Jun 2026 – Present*

- **Increased course participation by 40% within three months** — engineered an email course platform (AI Track, Next.js, Firebase) with bulk enrollment for 150+ students and admin progress tracking.
- **Led end-to-end development of TovSpace** — a bilingual React assessment platform for the Techability 2026 pilot that evaluated 60+ candidates across 15 modules with in-browser Excel/Word grading.
- **Migrated 5,000+ Firestore records and Firebase Auth accounts to production with zero data loss** — scripted backup, restore and validation steps, and cut database reads by 30% by removing redundant queries.
- **Removed 300+ dead listings from TovMatch** — built a link checker for a Gemini-powered job-matching platform (Flask, MongoDB, Docker) that detects broken links and bot-blocking pages in scraper output.
- **Built the backend of an internal employee portal for 25+ staff** — role-based access control, session auth and Cloudflare D1; also built learn-sync, a Claude Code skill that syncs learner progress via REST API.

Amdocs — *Software Engineer* · Nazareth *Oct 2021 – Feb 2023*

- **Cut manual testing by 50%** — built 150+ automated TestNG regression tests that run in the CI/CD pipeline.
- **Isolated the root cause of 40+ failures in Linux environments built on C++ libraries** — reproduced issues, debugged with gdb and strace, analyzed logs, and documented findings for developers.
- **Caught 20+ defects before release** — designed CI/CD test scenarios, executed performance and security tests, and validated JSON payloads exchanged between services on Linux and AWS.
- **Delivered 15+ Jira user stories end to end** in an Agile/Scrum team, from requirements to release.

PROJECTS

- **WhatsApp AI Support Bot** (Jun 2026) — Gemini-powered support bot handling ~120 messages/day and automatically resolving 48% of inquiries, with a live dashboard for human takeover of escalated chats.
- **Captain Fix** (Aug 2025) — cut manual test authoring time by ~70% in internal pilots with an AI test generator that analyzes live websites and auto-generates Selenium test suites using Claude Opus 5.5.
- **Bank Management System** (May 2024) — full-stack banking app with a Java Spring Boot backend (JPA, Hibernate, MySQL), REST APIs for account transactions, JWT authentication (Spring Security) and Maven.

EDUCATION

B.Sc. Mathematics & B.A. Business Administration — The Hebrew University of Jerusalem, 2021
Coursework: Data Structures, C, Operating Systems, Computer Networks, Probability, Linear Algebra
Professional Development (2023 – 2026): Self-study courses in software engineering and AI
Languages: Arabic (Native), Hebrew (Fluent), English (Fluent)
