RANI ABU RAIA

Software Engineer – Python, AI/LLM, Test Automation

Phone: 052-484-7811 Email: aburaiarani@gmail.com Location: Sakhnin, Israel (open to Haifa / Center)
Portfolio: rani-support.com LinkedIn: linkedin.com/in/rani-abu-raia GitHub: github.com/RaniAbu95

SUMMARY

Software Engineer with 2 years of experience in backend systems, LLM-powered applications and test automation. Hands-on with Python, JavaScript/TypeScript, Java, SQL, REST APIs, CI/CD and Linux, plus AI coding tools (Claude Code, Codex). Strong math background and a focus on reliable, tested code.

SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, C++, C, SQL, Bash, PowerShell
Backend & Frontend: REST APIs, Flask, Node.js, Spring Boot, React, Next.js, HTML/CSS
Databases: PostgreSQL, MySQL, MongoDB, Firebase (Firestore), Supabase, Cloudflare D1
AI & LLM: LLM APIs (Claude, Gemini), RAG, few-shot prompting, Claude Code, Codex
Testing & Automation: Pytest, Selenium, Appium, TestNG, API / E2E / Regression / Performance Testing
Cloud & DevOps: AWS (EC2, S3), Google Cloud, Docker, CI/CD Pipelines, Git, Maven, Kafka
Linux & Networking: Linux, Windows Server, gdb, strace, Wireshark, TCP/IP, UDP, HTTP, DNS

EXPERIENCE

TovTech, Software Engineer, Remote, *Jun 2026 – Present*

- Increased course participation by 40% within three months by engineering an email course platform (AI Track) with bulk enrollment for 150+ students and admin progress tracking.
- Led end-to-end development of TovSpace, a bilingual, accessible React assessment platform for the Techability 2026 pilot, evaluating 60+ candidates across 15 work-simulation modules with in-browser grading of real Excel/Word files.
- Migrated 5,000+ Firestore records and Firebase Auth accounts to production with zero data loss, and cut database reads by 30% by scripting backup, restore and validation steps and removing redundant queries.
- Removed 300+ dead listings from TovMatch, a Gemini-powered job-matching platform (Flask, MongoDB, Docker), by building a link checker that detects broken links and bot-blocking pages in scraper output.
- Built a Claude Code skill (learn-sync) that syncs learner progress via REST API, and the backend of the employee portal for 25+ staff (Cloudflare D1, session auth, role-based access control).

Amdocs, Software Engineer, Nazareth, *Oct 2021 – Feb 2023*

- Cut manual testing effort by 50% by developing automated TestNG regression suites of 150+ test cases that ran in the CI/CD pipeline.
- Isolated the root cause of 40+ failures in Linux environments built on C++ libraries by reproducing issues, debugging with gdb and strace, analyzing logs, and documenting findings for developers.
- Caught 20+ defects before release by designing CI/CD test scenarios, executing performance and security tests, and validating JSON payloads exchanged between services on Linux and AWS.
- Delivered 15+ Jira user stories end to end in a cross-functional Agile/Scrum team, from requirements through code review, testing and release.

PROJECTS

WhatsApp AI Support Bot (Jul 2026): Built a Gemini-powered customer support bot for WhatsApp, handling ~120 messages/day and automatically resolving 48% of inquiries, with a real-time monitoring dashboard that lets human agents take over escalated conversations.

Captain Fix (Aug 2025): AI-driven test generator that analyzes live websites and auto-generates Selenium test suites using Claude Opus 5.5. Reduced manual test authoring time by ~70% in internal pilots.

Bank Management System (May 2024): Full-stack banking app with a Java Spring Boot backend (JPA, Hibernate, MySQL), REST APIs for account transactions, JWT authentication (Spring Security) and Maven.

EDUCATION

B.Sc. Mathematics & B.A. Business Administration — **The Hebrew University of Jerusalem**, 2021

Coursework: Data Structures, C, Operating Systems, Computer Networks, Probability, Linear Algebra

LANGUAGES

Arabic (Native), Hebrew (Fluent), English (Fluent)
